## Troubleshooting

Trouble	Cause	Remedy
No refrigeration.	Is the plug in the socket correctly?	Check the plug.
	Is the fuse broken?	Check fuse and replace if needed.
	Is there no power from the socket?	Plug another unit into the socket to check if it works.
Unsatisfactory refrigeration.	Is it in direct sunlight or near a heat source?	Move away from the heat source.
	Is the surrounding area bad for ventilation?	Move to an area with improved ventilation.
	Does the door close correctly? Is the door left open?	Check the door.
	Is the unit too full?	Remove some food.
	Is the temperature controller correct?	Check the controller.
Too much noise.	The fridge is not sitting level.	Move to a flat surface.
	The fridge is vibrating off something else.	Move the unit so it is not touching anything.
	There is a loose part in the refrigerator.	Check the interior for loose items.
Contact Omcan at 1-800-465-0234 for help if simple troubleshooting does not solve the problems.		

The following situations are not problems:

1. The murmur of water is heard when the refrigerator is working. This is normal as the coolant is circulating in the system.
2. Condensation may be found on the outside of the refrigerator. This is not a problem, this is caused by high humidity. Simply use a cloth to wipe it.
