Redefining The Benchmark For Vacuum Packaging Machines

Turbovac offers a full range of vacuum packaging machines: reliable, robust, and easy to service and maintain. Turbovac recently redesigned its complete range of vacuum packaging machines and made them even easier to operate and clean.

The full range of machines and available options makes it easy to select exactly the right solution for your packaging needs.

All models have hygienic easy-to-clean vacuum chambers and easily removable seal beams and silicon bars. An intuitive digital control unit can automatically detect the optimum vacuum level for each product. And for products with a high moisture content, the control unit retains exactly the right amount of moisture.

This improves the tenderness and flavour of the products. With an ingenious redesign focusing on functionality, Turbovac is now setting the standard for quality and design in the industry

Sensor/ Time Control

- With a sensor controlled machine the vacuum is measured with a sensor with very high accuracy and the results are digitally displayed
- With a time controlled vacuum machine a time is set and the vacuum level can be monitored with an analogue vacuum meter

Soft Air

The Soft Air program slowly brings the air pressure in the machine back to atmospheric level. This allows the plastic to wrap and stretch around sharp edges of the product which might otherwise puncture the plastic bag. Fragile products will keep in the right form when Soft Air is added.

Modified Atmospheric Packaging (M.A.P - Gas flush)

Some products cannot be packaged under vacuum but may better packaged by replacing the air by a mix of gases, like the Inert gas Nitrogen (N2), Carbondioxide (Co2) or Oxygen (O2) to increase shelf life and appearance.
